tt Cell Library: Process DTT_PTYPICAL_V1P2_T25, Voltage 1.20, Temp 25.00

Cell Description

The MDFFQ cell is a positive edge-triggered, static D-type flip-flop with a 2-to-1 data-select control (S0) for the data inputs (D1, D0). The cell has a single output (Q).

MUX2X0P5H7L

tt Cell Library: Process DTT_PTYPICAL_V1P2_T25, Voltage 1.20, Temp 25.00

Cell Description

The MUX2 cell is a 2-to-1 multiplexer. The state of the select input (S0) determines which data input (A, B) is presented to the output (Y). The output (Y) is represented by the logic equation:

WARNING: The output pin Y has the potential to glitch low during a high-to-low transition on the S0 input when A=B=1. Use this cell with caution when driving clock or other control signals in your design.

Cell Description

The MUX2 cell is a 2-to-1 multiplexer. The state of the select input (S0) determines which data input (A, B) is presented to the output (Y). The output (Y) is represented by the logic equation:

WARNING: The output pin Y has the potential to glitch low during a high-to-low transition on the S0 input when A=B=1. Use this cell with caution when driving clock or other control signals in your design.

Cell Description

The MUX2 cell is a 2-to-1 multiplexer. The state of the select input (S0) determines which data input (A, B) is presented to the output (Y). The output (Y) is represented by the logic equation:

WARNING: The output pin Y has the potential to glitch low during a high-to-low transition on the S0 input when A=B=1. Use this cell with caution when driving clock or other control signals in your design.

Cell Description

The MUX2 cell is a 2-to-1 multiplexer. The state of the select input (S0) determines which data input (A, B) is presented to the output (Y). The output (Y) is represented by the logic equation:

WARNING: The output pin Y has the potential to glitch low during a high-to-low transition on the S0 input when A=B=1. Use this cell with caution when driving clock or other control signals in your design.

Cell Description

The MUX2 cell is a 2-to-1 multiplexer. The state of the select input (S0) determines which data input (A, B) is presented to the output (Y). The output (Y) is represented by the logic equation:

WARNING: The output pin Y has the potential to glitch low during a high-to-low transition on the S0 input when A=B=1. Use this cell with caution when driving clock or other control signals in your design.

tt Cell Library: Process DTT_PTYPICAL_V1P2_T25, Voltage 1.20, Temp 25.00

Cell Description

The MUXI2 cell is a 2-to-1 multiplexer with inverted output. The state of the select input (S0) determines which data input (A, B) is presented to the output (Y). The output (Y) is represented by the logic equation:
